

EMPOWER. TRANSFORM.

For communications service providers (CSPs), it is always a challenge to design a cost-effective DDoS protection solution for customers. But since CSPs are often the first resource customers turn to when they are under attack, DDoS protection is no longer a "nice to have" feature for customers, but a business necessity in order for CSPs to stay competitive. While acknowledging a growing demand for DDoS protection from customers, most CSPs have little or no expertise in handling DDoS attacks, let alone the knowledge of running DDoS mitigation as a business.

This is where the Transformational Alliance Partner (TAP) program comes into play. The program provides customized, cost-effective DDoS protection solutions for CSPs, protecting the core infrastructure while meeting customer demand for comprehensive DDoS protection. Most importantly, the program is designed to empower CSPs with the People, Processes and Technology in order for them to build, deliver and profit from DDoS mitigation services, aiding in their transformation into the next-gen CSP.

SUCCEED.

· Tap new revenue streams

Roll out or make our solutions part of your cleanpipe or cybersecurity business quickly and increase profitability.

· Complete your cybersecurity portfolio

Augment your existing cybersecurity or cleanpipe solutions by offering new or additional features.

Gain a competitive edge

Differentiate your brand and gain a long-term competitive advantage in your cybersecurity or cleanpipe offering.

Maximize uptime and service availability

As long as your customers rely on you to deliver mission-critical services, it's crucial to deliver maximum uptime and availability.

· Minimize collateral damage risk

Avoid network collateral damage in which other critical services are also affected.

Gain granular visibility

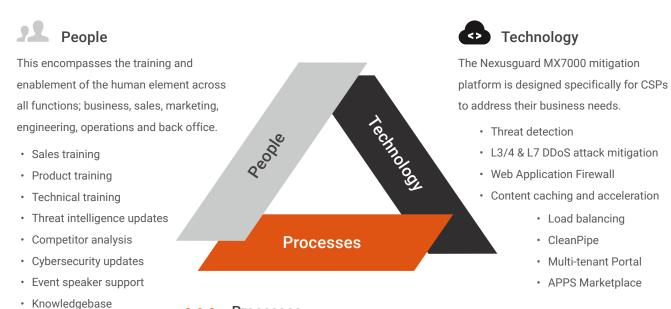

Distinguish attacks from clean traffic, troubleshoot quickly and leverage traffic visibility to better understand customers.

· Learn and grow

Gain access to best-in-class product, sales and marketing, and cybersecurity trainings.

Transformational Alliance Partner (TAP) Program

The TAP program is an end-to-end enablement program designed to deliver the elements necessary for CSPs to speedily arrive at an end-state in which they are fully equipped to address the cyber threats of their environment and deliver high quality security offerings to their customers. The program achieves this by elevating three elements of a CSP's capabilities - People, Processes and Technology.

Processes

Helping CSPs build and maintain the day-to-day operations necessary of a security business.

- · Customer profiling
- POC support
- · Event monitoring
- · SOC consultation
- Emergency response
- · Go-to-market strategy
- Troubleshooting
- · Sales enablement

Transformation in 90 days

Be empowered, transform your business and succeed in DDoS mitigation services in as little as 90 days.

Phase 1
Hardware procurement, network design and project team formation

Phase 2
Hardware installation,
configuration and UAT

Phase 3
SOC set-up consultation, security
associate training and go-to-market
enablement

Flexible Solutions for CSPs & Customers

You and your customers need tailored DDoS protection to deliver uninterrupted network services at all times. This is exactly why we structure the TAP program in a flexible way that facilitates how you and your customers do business:

Complete suite of DDoS defense solutions

Nexusguard Cybersecurity Platform provides a complete suite of DDoS mitigation and network optimization solutions to defend against volumetric L3/L4 attacks and complex L7 attacks, and enhance content and application delivery. The program further includes security training programs and access to security intelligence. Simply choose the right mix of solutions from our portfolio and make them yours.

Flexible deployment

We offer flexible deployment options: pure-cloud, local+cloud scrubbing and hybrid to integrate our platform into your existing solutions, all depending on your network capacity, legacy setup and data residency requirements.

Sweet spot between self-service and fully managed

Our service tiers are flexible and adaptable. Depending on the required level of protection, network resources and security expertise, you can choose between self-service and fully-managed models, or anywhere in between. At the highest level, we provide 24-hour SOC support, fully automated mitigation and reports on the status of the server.

Partner portal

Designed for multi-tenant environments, Nexusguard Portal is a premier traffic visibility, management and reporting system built to meet the diverse needs of modern networks.

Nexusguard Portal combines network visibility, powerful tools and educational resources to create a "single-pane-of-glass" platform for managing DDoS detection and mitigation policies and obtaining actionable intelligence.
